www.stenotype-grandjean.com

The Stenotype Grandjean company manufactures shorthand machines since 1923 and market them in numerous countries. The new Tempo! Nova machine, designed for the 21th century, will be exhibited in Vienna.

Grandjean developed also a transcription software, Stefania, knew as the best in french language, but working too in spanish language and soon in english language. The Nova machine plus the Stefania software make together the new efficient offer by Grandjean company.

Grandjean is also a network of training centres where the professionals prepare their future.

Telitor - Usa

www.telitor.com

TeLiTor™ brings the transcription into the Microsoft Office providing a standard desktop environment. It is the industry's most significant advancement in computerized Transcription since the introduction of Personal Computers.

Our patented technology called *StenoLink*™, allows the steno to remain linked to the text in the WORD document. This allows the reporter, for the first time ever, to <u>directly</u> deliver a finished product with synchronized audio video, pictures, hyperlinks to exhibits, etc. No other CAT system can do this without first exporting the text files and then manipulating them with other proprietary software.

TeLiTor incorporates a very sensible, advanced, proven, and language independent ARTIFICIAL INTELLIGENCE SYSTEM, capable of learning and resolving homonyms in any language. If fact it is the only CAT that has been proven efficient and viable for French, a language that has an enormous amount of homophones.

Word Technologies - Usa

www.wordtechnologies.com

Eclipse shares its Worldwide Leadership with no one. It's one thing to make claims and another to show proof. *Total Eclipse* supports virtually any language supported by Windows, and works with dictionaries in multiple languages simultaneously. **Only** *Total Eclipse* supports speech-input devices and international keyboards like the Tréal, Palantype, Stenotype Grandjean, and Michela shorthand machines. *Total Eclipse* is recognized by those knowledgable about the transcription software business as industry as the most innovative, technically advanced and productive software in the business. Just some of the reasons Advantage Software is the choice of the courts, parliaments, and commercial businesses around the world. And, check out the **Tréal,** one of the leading shorthand keyboards in Europe and more suitable for a wider range of language applications than traditional machines.

Stenograph - USA

www.stenograph.com

Stenograph is the leading developer of computer aided transcription software and shorthand machines worldwide. Please visit our display to view the latest advancements in shorthand machine technology and the various keyboard configurations used around the world.

Case CATalyst, the #1 CAT system in the world, will be demonstrated. Not only is it used in traditional court and parliamentary proceedings, it's ancillary products include BCS, the broadcast captioning suite; and a "voice writer" module embracing voice recognition. In addition, all text from Case CATalyst can be streamed worldwide via the Internet through Speche Communications, as demonstrated during the Stenograph presentation.
